300	Paul Lee	123 Rose Court	D0004	20-mar-10	E10	Petit Ball Room	SA2	Apple pie

a. Analice la información previa e indique si existe algún valor multivaluado. Justifique su respuesta.

Si hay valores multivaluados (member numb, dinner number) ya que para una misma clave hay diferentes platos o valores de comida (Food Code, Food Description), en conclusion el atributo multivaluado es FOOD

b. Considerando la estructura e información proveida en la Tabla No. 3, plantee el esquema relacional de bases de datos con nombre de tabla: "Member_Dinner".

```

Member_Dinner(
Member_Num,
Member_Name,
Member_Address,
Dinner_Num,
Dinner_Date,
Venue_Code,
Venue_Description,
Food_Code,
Food_Description,
PK(Member_Num, Dinner_Num)
)
```

Debido a que una cena puede tener múltiples platos, la clave podría extenderse a (Member_Num, Dinner_Num, Food_Code).

c. Suponiendo que pueda identificar las dependencias funcionales de la tabla No. 3, realice un diagrama de dependencias funcionales para la 1ra Forma Normal del literal anterior.

Member_Num → Member_Name, Member_Address

Dinner_Num → Dinner_Date, Venue_Code

Venue_Code → Venue_Description

Food_Code → Food_Description

(Member_Num, Dinner_Num) → (relación de asistencia)

Member Number	Member Name	Member Address	Dinner Number	Dinner Date	Venue Code	Venue Description
